Dear Sir/ Madam,

Re: Pacific Blue Metal 2025 IEA Request for additional information

As per your email dated 10/10/25, requesting additional information, Pacific Blue Metal submits the below response.

IEA Opportunity for Improvement	PBM Response
Consider including meteorological conditions prevailing during the monitoring in noise reports	Meteorological data prevailing during each noise monitoring event is provided to the Noise Monitoring Consultant for the time period monitoring is undertaken. The consultant uses this data to determine whether the prevailing meteorological conditions are compliant in accordance with the requirements of MOD 283/97, Schedule [insert clause number]. Where weather conditions are non-compliant, this is clearly stated in the noise report. A report without such a statement indicates that compliant meteorological conditions prevailed during the monitoring period. Should the Department prefer that meteorological conditions (e.g. wind speed, direction, temperature, and humidity) be included in all noise reports, regardless of compliance status, Pacific Blue Metal will implement this change in future reporting.

Should you have any queries please do not hesitate to contact me on 6554 3206 or qse@pacificbluemetal.com.au .

Yours sincerely,
Stacey Tyack

Quality, Safety & Environment Manager
